

I contributed to the RoomStudio project by guiding visual design direction and improving usability through design consultation. I worked with the team to define key design keywords such as boxy, sleek, outlined, and neobrutalism, and presented three logo/icon directions. I also reviewed the app demo and evaluated its interface. From this, I recommended improvements including grid visibility toggling, ruler-based snapping, clearer toolbar labeling, and a history system for undo actions. These changes enhance usability and align the interface with familiar design tools. My contributions helped connect design decisions with practical functionality, resulting in a more intuitive and visually consistent application.
