

Pixel Progression

A Hybrid Platformer with
Text-Driven Progression

PROJECT BY

Christopher Barker

Jaden Pulido-Hughes

Levi Read

Game Details

Inspirations

- Candy Box progression systems
- Classic 2D platformers

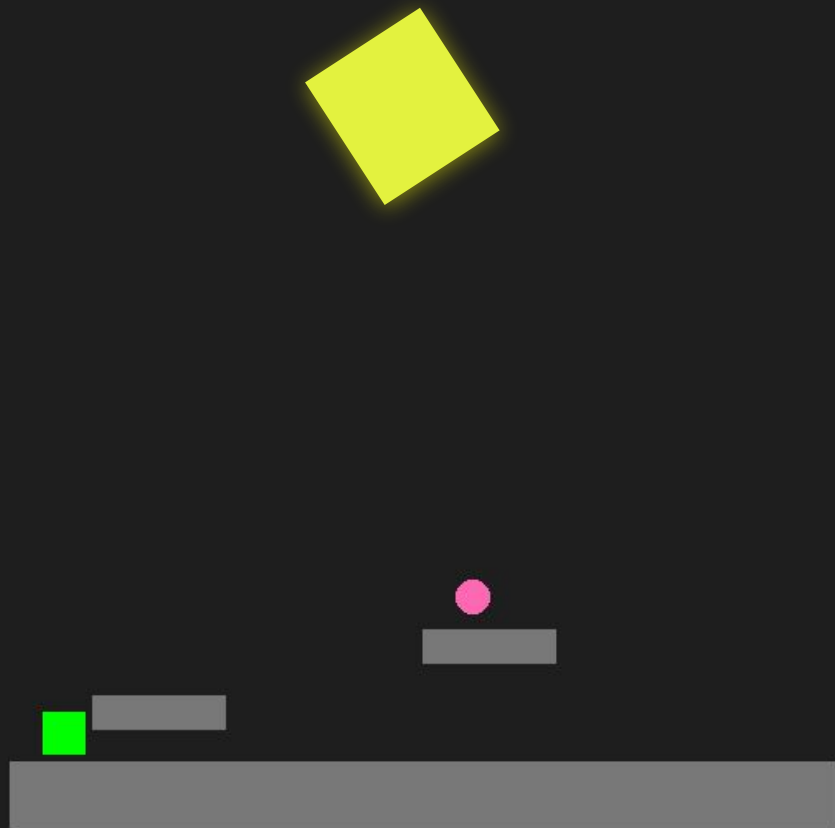

Core Gameplay Loop

- Complete platforming challenges
- Collect candies
- Unlock upgrades and abilities
- Access new traversal opportunities

Design Goals

- Blend active gameplay with incremental progression
- Reward replayability and player choice
- Keep visuals simple and readable

PIXEL **PROGRESSION**

Program Details

HTML

- Front-end structure and UI

JavaScript

- Handles gameplay physics, upgrades, enemy logic, and state transitions

CSS

- Controls visual styling and layout

PHP

- Handles backend save/load logic and score systems

SQLite

- Stores player progress, scores, and user information

PIXEL **PROGRESSION**

HTML

CSS

Architecture Framework

FRONT END

- index.php
- game.js
- home.php
- leaderboard.php
- login.php / register.php
- Audio and visual assets

BACK END

- save.php
- reset.js
- logout.php
- score.php

DATABASE

- game.db
- login.db

Front End

Front End Features

- Canvas-based platformer gameplay
- Real-time movement and collision systems
- Upgrade menus and progression systems
- HUD displaying health and candy count
- Login and leaderboard interfaces

Core Files

- index.php
- game.js
- CSS stylesheets

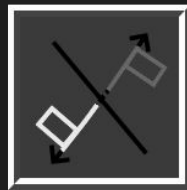

PIXEL PROGRESSION

HOW TO PLAY

LEADERBOARD

LOG IN

Back End

Back End Features

- Saves player progress using PHP
- Handles score submission
- Maintains login sessions
- Supports resetting and loading save data

Core Files

- save.php
- reset.php
- logout.php
- score.php

Database

Database Flow

1. Gameplay session completes
2. PHP receives save request
3. SQLite stores updated player data
4. Progress reloads on next session

Stored Data

- User accounts
- Scores
- Candy totals
- Upgrade progression

Demo Game

Demo Goals

- Gameplay loop
- Demon upgrades
- Show progression
- Display
save/load
